Enterprise Core Values

Professional and dedicated sales team, Long-term and stable customers, Worldwide sales network, Rich experience in marketing, Fast and accurate market information, Unique product line, Consistent quality service.

Work style

Professional: Serve customers in the most professional way.

Efficient: We provide the fastest solutions.

Enthusiastic: Follow up cooperation with the greatest enthusiasm.

Persistence: With the most sincere attitude to achieve the win-win cooperation.

Cultural philosophy

Enterprise mission: Bring excellent Chinese tyres to all over the world.

Enterprise vision: Become the international leading tyre supplier.

Business philosophy

Take the staff as the root and take the customer as the center.
Product-based, market-oriented.
Constantly improve brand core competitiveness, aim to be the global leading tyre supplier.

RIM SIZE	12 - 16
SERIES	55 - 80
SPEED RATING	T - V

Four wide circumferential tread grooves deliver the ride stability and offer excellent performance on wet conditions. Improved grooves and bead profile design offer better ride stability, endurance and handling performance.

Continuous solid center rib and lateral tread blocks connected by rib-in-chain enhance steering stability, decrease block deformation and reduce energy loss.

Continuous tread blocks on both shoulder give great support to enhance the stability when cornering, the closed shoulders deliver excellent quiet ride.

Special tread compound delivers excellent grip on both dry and wet roads and offer longer mileage.

M+S

RIM SIZE	13 - 16
SERIES	55 - 80
SPEED RATING	T - V

Safety performance on wet grounds four wide longitudinal straight groove efficiently drain off water ,improving sideslip performance on wet grounds.

Comfort and quietness small cross-slots at both side of continuous circumferential ribs in the middle simulate the muffler design principle and have strong noise absorption capacity thus ,noise is effectively reduced,and riding comfort is improved..

Small shoulder circumferential longitudinal grooves at both sides and plump little pattern blocks on shoulders bring ideal rigidity and excellent handing. meanwhile,small circumferential longitudinal grooves enable tires shoulders to diffuse heat quickly,providing higher safety performance.

RIM SIZE	15 - 21
SERIES	30 - 60
SPEED RATING	H - Y

Four wide vertical ditches ensure excellent drainage performance and handling performance of wetland pavement. Meanwhile, drainage groove and optimized curved tire shoulder design can ensure fast and efficient drainage in deep water-filled pavement, which can still guarantee wetland performance.

Raised design at the bottom of the trench, excellent quiet comfort the raised design at the bottom of the longitudinal trench with circumferential discontinuous pattern can interfere with the air column connected to the groove, reduce resonance and thus reduce the noise generated by the longitudinal trench.

The shoulder pattern block, accurate high-speed driving and control performance the outer continuous shoulder design, to strengthen the high-speed steering performance and lateral grip; Inside drainage trench ensure quick and efficient drainage.

Tread pattern, Stable performance in straight line large ground area of the continuous pattern block design, achieving good high-speed braking and steering stability.

Sidewall-reinforcement rubber
This sidewall-reinforcement rubber is an important part of RFT technology. It is stronger than normal tire rubber. When the tire's air is gone, sidewall-reinforcement rubber can still handle the vehicle's weight and keeps it driving.

Low-heat bead
It uses low heat rubber, can restrain the heat under zero-pressure driving condition and increase the endurance.

Low-heat bead
It uses low heat rubber, can restrain the heat under zero-pressure driving condition and increase the endurance.

SPEED RATING	H - W

Four wide circumferential tread grooves and lateral grooves with fine sipes provide efficient water evacuation, outstanding wet performance.

Continuous outside tread blocks enhance excellent performance and precise control when cornering at high speed. The special rib segment design optimize contact pressure distribution, improve road contact area and provide precise control. The serrated groove walls absorb noise and deliver a quieter ride.

Continuous block patterns on shoulder enhance the ride stability at high speed cornering. The rim protector will protect wheels from curb damage.

Special tread compound delivers excellent grip on both dry and wet roads and reduce the rolling resistance to save oil and protect environment.

M+S

RIM SIZE	16 - 18
SERIES	55 - 85
SPEED RATING	S - H

Four wide circumferential tread grooves deliver the ride stability and offer excellent performance on wet conditions. Improved grooves and bead profile design offer better ride stability, endurance and handling performance.

Variable pitch pattern and solid center ribs improve the ride stability, reduce the noise and deliver a comfortable ride.

The open shoulder grooves prevent aquaplaning with enhanced wet grip performance and provide excellent water evacuation. Continuous tread blocks on both shoulder give great support to enhance the ride stability when cornering.

High-density sipes with special compound deliver a smooth ride and improve traction on dry and wet roads. Jointless Nylon band and strong structure design provided the strong carcass to enhance the reliability and durability.

Three main zigzag grooves combined with lateral blocks provide excellent ride stability and great traction on all kinds of road conditions.

Variable pitch patterns and multi-knife-cut tread pattern reduce vibration to offer the comfort and quiet ride.

Continuous tread patterns on shoulder and solid shoulder ribs provide responsive handling and even wear.

Reinforced structure and special abrasion-resistant tread compound deliver extra puncture resistance and load bearing capability with more mileage.

Performance test:

All-season tread design with long tread life.

Double steel belts plies and double full joint-less nylon cap plies improve handling stability and durability.

Double-ply casing construction handles heavy loads at highway speed and delivers outstanding durability.

Wide circumferential grooves helps to evacuate water quickly and efficiently.

SPEED RATING	R

Reinforced structure and special abrasion resistant tread compound deliver extra puncture resistance and load bearing capability with more mileage.

Continuous tread patterns on shoulder and solid shoulder ribs responsive handling and even wear.

Three main zigzag grooves combined with lateral blocks provide excellent ride stability and great traction on all kind of road conditions.

White sidewall rib shows extraordinary appearance.

SPEED RATING	T - Y

Four wide circumferential tread grooves, effectively improve the wet performance, ensure excellent handling performance under raining and snowing weather.

Asymmetric pattern design, the middle block, effectively enhances the traction and safety on snow and ice road.

Tread formula takes the four seasons driving conditions and climate conditions into account, driving control performance is excellent and stable, unobstructed Four Seasons.

The corrugated steel sipes on the blocks reduce the rigidity of blocks and improve the comfort when driving.

Rotation pattern
It satisfies the comfortable driving texture while improving the driving stability, improving the passability of the snow surface, and ensuring driving safety.

Optimized horizontal groove design:
The horizontal grooves of alternating thick and thin meet the safety of driving in the changeable snow.

V-shaped embedded pattern design:
The embedded pattern design has both appearance and practicality, and the sharp angle pattern block can effectively replace the water film to enhance the grip.

Z-shaped longitudinal groove design
The zigzag-shaped longitudinal grooves help the blocks to stabilize on the snow surface, and can effectively cooperate to ensure the snow passing ability in the forward direction.

Asymmetric pattern
Match the performance requirements of high end sports cars Wide inner gully design enhances drainage effect.The outside of the dense pattern block provides strong handling performance.

Folding groove:
It can effectively improve the fault tolerance rate in all directions, assist in controlling the vehicle attitude, and improve the ultimate controllability.

Blade cut angular pattern block
Provides higher grip and the ability to break through the water film, deep into the snow surface. 3D wavy steel sheet design provides good grip while increasing tread hardness to meet extreme handling.

Silica formula
The special silica formula guarantees the softness on the snow while increasing the strength of the pattern blocks to meet the controllability.

RIM SIZE	13 - 20
SERIES	40 - 70
SPEED RATING	T - H

Four wide circumferential tread grooves and lateral grooves with fine sipes provide efficient water evacuation, outstanding wet performance. The optimized deployment of "Z" shape sipes, provide great grip on snow & ice conditions.

Continuous outside tread blocks enhance excellent performance and precise control when cornering at high speed. The special rib segment design optimize contact pressure distribution, improve road contact area and provide precise control. The serrated groove walls absorb noise and deliver a quieter ride.

Continuous block patterns on shoulder enhance the ride stability at high speed cornering. The rim protector will protect wheels from curb damage.

Special tread compound remains flexible at lower temperatures to make sure the grip on winter road conditions and reduce the rolling resistance.

SPEED RATING	R - T

Optimized groove It is beneficial to improve the stability of driving on ice and improve driving safety.

Optimized structure profile The optimized structure profile is matched with dense and robust pattern blocks to meet the better carrying capacity of the vehicle.

Shoulder support The Shoulder continuity pattern block can improve the strength of the tire shoulder, improve the support effect with the ground, and ensure driving safety.

New steel sheet design: The optimized steel sheet structure can meet the requirement of antiskid performance and evenly disperse various stresses, so that the tread wear is more uniform and the wear resistance is improved.

Ice X pro

M+S

RIM SIZE	13 - 17
SERIES	45 - 75
SPEED RATING	S

Multi-directional groove distribution design
It is helpful to improve the stability of driving in ice surface and improve driving safety.

High-density 3D steel blade design
While ensuring the softness of the grounding surface of the tire, the overall block strength is improved to ensure super grip and reduce driving lag.

Diamond cut corner design
It can effectively break through the water film, steadily pierce the ice surface and improve the anti-slip effect.

High-score white carbon black formula design
Improve tire grip in cold environments and ensure the safety performance of tires at low temperatures.

SNOWMARCH

M+S

RIM SIZE	12 - 21
SERIES	45 - 75
SPEED RATING	R - H

Two broad longitudinal plus two curved wide gutters, effectively improve the performance of the tire wetland drainage, to ensure the excellent handling performance on rain-snow road.

Asymmetric pattern design, the pattern block in the middle, effectively enhances the traction and safety performance on snow-ice road.

A new generation of tread pattern design, lower temperature tread formulation, softer than the previous generation of tread with Shao's hardness.

A large number of corrugated steel block on the pattern, maintains maneuverability when contacting the road, and sharp edges can significantly enhance the traction in slippery and ice road.

RIM SIZE	14 - 17
SERIES	45 - 75
SPEED RATING	R - H

Special tread design, deep shoulder pattern depth, ensure effective self-cleaning and snow-outing.

A large number of corrugated steel sipes on the block, maintain maneuverability when touching the pavement, and the sharp edge can significantly enhance the traction on wet-slippery and snow-ice road.

The single-directional wide "V" type longitudinal groove effectively enhances the performance on the ice-wet road.

Studded pattern design effectively improves the traction and safety performance on ice and snow road.

Tire Sidewall marketing descriptions

Speed

Speed symbol indicates the maximum travel speed that the tire can achieve understated condition.

SS	Maximum Speed (km/h)
L	120
Q	160
S	180
T	190
H	210
V	240
W	270
Y	300
*ZR	over 240km/h

*ZR means ace tain range of speed

Maximum speed refers to the speed that the tire can achieve on flat road after normal installation.

Loading Index

Load index refers to numeral value of tire's maxi num load ability understated condition.

LI	loading capacity	LI	loading capacity	LI	loading capacity	LI	loading capacity
